PROFESSIONAL SUMMARY

Software Engineer with production full-stack and backend experience delivering features across React, Go, PHP, PostgreSQL, REST APIs, and microservices—including API integration, transactional processing, authentication, GitLab CI/CD deployments, and cross-stack debugging.

Enterprise identity management background (SailPoint, Oracle Identity Analytics) with Agile delivery; targeting Software Engineer, Full-Stack, Backend, Platform, API, React, and Golang roles.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Go (Golang), PHP, SQL, HTML, CSS, Shell scripting

Frontend: React 17, Redux, state management, custom hooks, form validation, REST API consumption

Backend: Go REST APIs, GORM, PHP, Node.js, RESTful API design, CRUD, transactional processing, API integration, authentication, microservices

Databases: PostgreSQL, relational modeling, multi-table transactional writes, schema alignment, Oracle SQL

Cloud & DevOps: GitLab CI/CD, Git, cross-compilation (Go/Linux), Apache, staging and production deployments, cloud deployment workflows, Azure fundamentals (AZ-900)

Tools & Platforms: Linux, Unix, Agile/Scrum, Jira, Eclipse, XML, SailPoint, Oracle Identity Analytics (OIA), IDAM, ITIL, BMC Remedy, distributed systems, production support

PROFESSIONAL EXPERIENCE

WiLine — Software Developer

August 2022 – Present | Dublin, Ireland

- Delivered an enterprise Vendor Contract Management System end to end across React, Go, and PHP: dynamic multi-type contract workflows (Type II, Real Estate, and others) with tailored validation, reusable hooks, and state management via custom hooks and Redux.
- Implemented production RESTful APIs in Go for full CRUD on vendor contracts, including transactional processing across related PostgreSQL entities (vendor contacts, NOC contacts, addresses) with GORM and strict struct/schema alignment.
- Built secure server-to-server integration between Go services and legacy PHP contract file storage using shared API keys and Base64 Basic Authentication; added standalone PHP endpoints for external upload/download without PHP session dependency.
- Resolved complex cross-stack production bugs spanning JavaScript, Go/database field mismatches, JSON unmarshal errors, and API edge cases—restoring stability for live users.
- Operated GitLab CI/CD pipelines for test and production: React builds, Go binary cross-compilation for Linux, and PHP releases—supporting repeatable cloud deployment practices.
- Developed and maintained full-stack web applications across PHP, React, JavaScript, and PostgreSQL; shipped enhancements and performance fixes through structured debugging and verification.
- Designed, built, and deployed standalone Node.js, React, and PostgreSQL operational tools to production and staging with ownership of business logic and data access.
- Partnered with cross-functional stakeholders in Agile development to plan work, unblock integrations, and support production support for released features.

Wipro — Application Engineer

April 2019 – July 2022 | Dublin, Ireland

SailPoint | 2020 – 2022

- Diagnosed and fixed application defects with development teams via Jira, delivering testable code changes validated through unit, integration, and UAT testing.
- Supported client-facing UAT and integration test cycles with engineers and customers to meet release quality bars.
- Applied Git, Eclipse, and XML in development environments to implement and verify fixes on IAM application codebases.
- Authored defect resolution documentation for engineering and support knowledge reuse.
- Raised ITIL-aligned change requests through BMC Remedy for controlled production change.
- Led batch run coordination using Unix shell scripting, PuTTY, and WinSCP across dependent teams.

Oracle Identity Analytics (OIA) | 2019 – 2020

- Integrated new resources into OIA using Oracle SQL and cross-team delivery for identity management initiatives.
- Executed server-side testing after patches—confirming application, web, and NFS/logging health on Linux servers before release approval.

Host Ireland — Network Engineer

September 2018 – March 2019

- Provisioned customer IP subnets and resolved network incidents through help-desk support.
- Configured customer routing paths on Juniper network devices.

PROJECTS

Customer Satisfaction Voting System — WiLine

December 2022 – February 2023

- Built a React web application with PostgreSQL persistence to collect customer satisfaction votes and feedback for service improvement.
- Owned front-end implementation and database-backed storage for reliable feedback capture in production.

Operational Automation Utilities — WiLine

2022 – Present

- Created standalone Node.js, React, and PostgreSQL scripts for internal workflows including data handling, application logic, and deployment to staging/production environments.

EDUCATION

BSc Computer Science — Dublin City University

August 2013 – May 2017 | Dublin, Ireland

Relevant study: data structures and algorithms, databases, cryptography.

CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals (AZ-900)
- TOGAF 9 Certified — The Open Group

ADDITIONAL TECHNICAL HIGHLIGHTS

- Full-stack ownership: UI (React/Redux), API layers (Go/PHP), and PostgreSQL data models in the same delivery cycle.
- Legacy + modern integration: Bridging new Go services with established PHP platforms without disrupting existing workflows.
- Production engineering: Deployment discipline, integration testing, and live defect triage across distributed application tiers.
- Enterprise IAM exposure: SailPoint and OIA experience with security-sensitive systems, change control, and auditability.
