PROFESSIONAL PROFILE

Full-stack software engineer based in Slane, Co. Meath (Dublin hybrid), shipping production React, Go, PHP and PostgreSQL systems for operational business workflows. Owns delivery end-to-end: complex forms, REST APIs, multi-table transactional data integrity, legacy integrations, GitLab CI/CD, and staging-to-production release. Strongest evidence: a Vendor Contract Management System built from scratch, including production bug ownership (upload race condition; wrong PostgreSQL column write). Uses AI-assisted development as a delivery method while remaining accountable for architecture, validation, and reliability. Prior Wipro/AIB identity-platform work under ITIL change control.

TECHNICAL SKILLS

Programming	JavaScript, Go, PHP, Node.js
Frontend	React, HTML, CSS
Backend / APIs	Go, PHP, Node.js, REST APIs
Data	PostgreSQL, Oracle SQL
Engineering / Delivery	Git, GitLab CI/CD, shell scripting, staging & production deployment, AI-assisted development
Enterprise	SailPoint, Oracle Identity Analytics, ITIL / change control, Unix tooling
Other	Microsoft Azure (AZ-900), TOGAF 9

PROFESSIONAL EXPERIENCE

Software Developer — Wiline

08/2022 – Present

US enterprise connectivity provider · React, JavaScript, PHP, Go, PostgreSQL, Node.js, REST APIs, Git, GitLab CI/CD · ~75% hands-on coding / ~25% design, review & release

Vendor Contract Management System — built from scratch

React · Go REST API · PostgreSQL · PHP file-store integration · GitLab CI/CD

- Designed and built an end-to-end Vendor Contract Management System for operational vendor workflows: multiple contract types, complex React forms, validation rules, and a custom React hook for shared form state and field logic.
- Implemented a Go REST API with full CRUD against PostgreSQL, including multi-table transactional writes that roll back on failure to prevent partially persisted contracts.
- Integrated the Go API with an existing PHP file-storage platform via API-key-protected upload/download endpoints — retaining the legacy store and avoiding disruption for existing users.
- Diagnosed and fixed a browser race condition (file list cleared before upload completion) and a field-name typo writing values into the wrong PostgreSQL column — production behaviour and data integrity ownership.
- Shipped via GitLab CI/CD with separate React, Go, and PHP pipelines across staging and production. Used AI-assisted development to accelerate implementation while owning architecture, validation, debugging, and release readiness.
- Develop and maintain full-stack apps for live operational processes (contracts, customer feedback, file handling, production data, integrations); deliver features and production bug fixes across React, PHP, JavaScript, and PostgreSQL.
- Led the Customer Satisfaction Voting System (12/2022 – 02/2023): React frontend with PostgreSQL persistence for service ratings — end-to-end ownership from UI through data storage; also build stand-alone Node.js / PostgreSQL / React scripts with staging and production deployment.

Application Engineer — Wipro (Allied Irish Banks)

04/2019 – 07/2022

Identity & access platforms · SailPoint · Oracle Identity Analytics · Oracle SQL · Git · Unix shell · BMC Remedy · Jira · ITIL

- Supported enterprise identity platforms in an audit-sensitive banking environment: defect diagnosis, application code changes, and controlled releases under ITIL change control (BMC Remedy).
- Performed unit, integration, and UAT testing before production; integrated resources into Oracle Identity Analytics with Oracle SQL; coordinated batch operations via Unix shell scripting.

Network Engineer — Host Ireland

09/2018 – 03/2019

Provisioned customer IP subnets, handled network help-desk queries, and configured routing on Juniper devices.

EDUCATION & CERTIFICATIONS

BSc Computer Applications — Dublin City University

2013 – 2017

Relevant modules included data structures & algorithms, databases, and cryptography.

TOGAF 9 — The Open Group · **AZ-900** Microsoft Azure Fundamentals
